

Ed-T

Educational Tracker

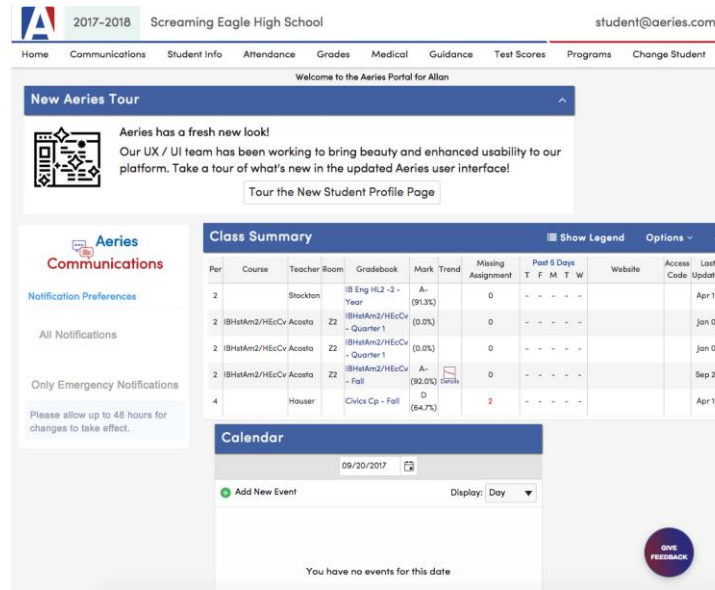

By Analy, Brandon, Christy, Patrick

About our Project

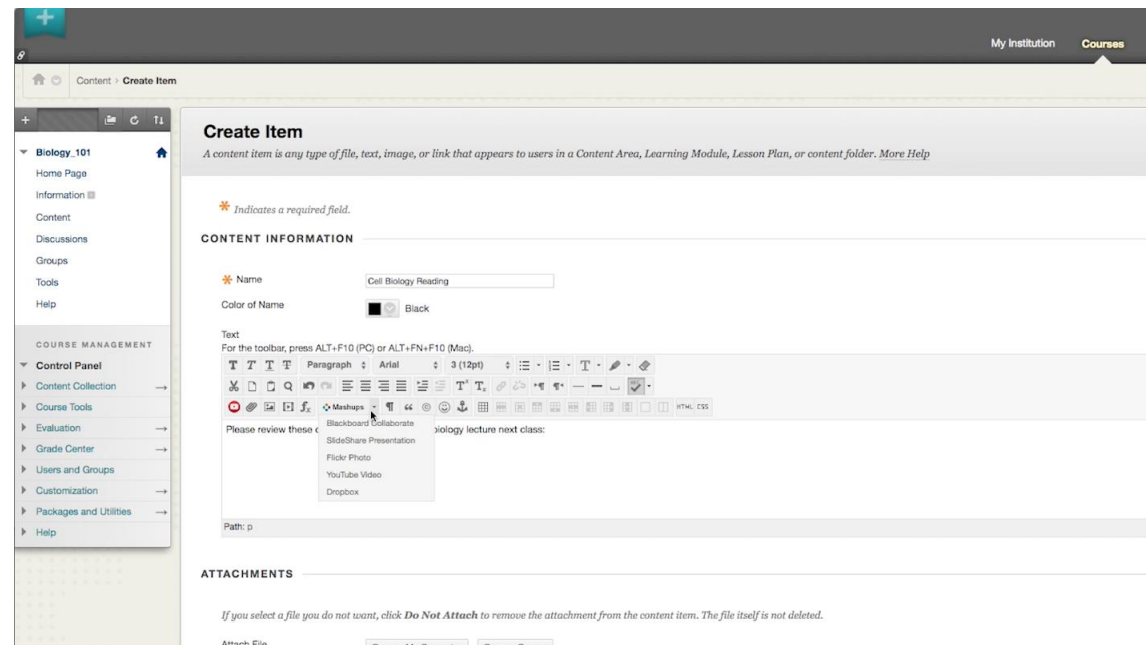

- We will be creating a website that can track students progress through analysis of their tasks used and unused. It will also try to provide a simple way for teachers to give the students work to complete by specific time period and assign various types of assignments based on the teachers chosen subjects.

-

What gave us the idea?

Aeries
Student information
Systems

Blackboard

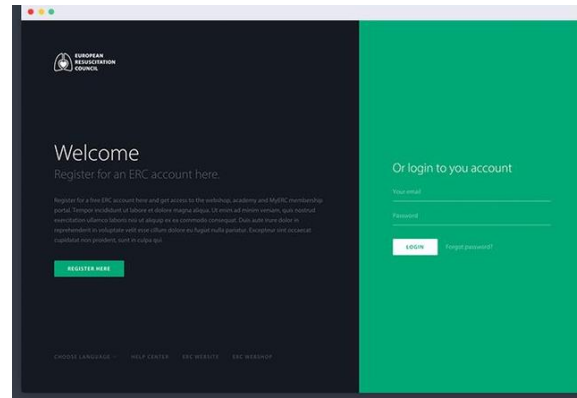

Brandon

- Will be working mostly back-end with the database.
- Will be using MySQL
- Login & Subject Tables

Patrick

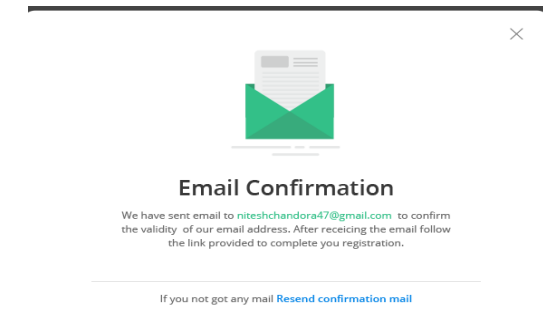

- Will be selecting our core subjects that will be used in our website.
- Will also be designing the structure of our websites using HTML, CSS.

Christy

Will be creating the login and registration pages process using html and php.

Will be creating a email confirmation page that verifies the users identity.

Analy

- Will be developing and designing the front-end using HTML, CSS and possible bootstrap templates.
- Will be starting with the student side of the front-end, starting by creating designs of how the website could be structured and what areas from both Blackboard and Aeries we plan to incorporate.
